Sprout Learn — Product Requirements Document (PRD)

Version: 1.0 (Prototype) **Owner:** Noel Lorenzo Vicente, Director of Alliance Management **Company:** Sprout Solutions (sprout.ph) **Purpose:** Internal innovation pitch — a native LMS platform for Sprout's HR ecosystem

---

1. Product Overview

Sprout Learn is a Learning Management System (LMS) built natively within the Sprout Solutions ecosystem. It allows organizations to upload their own training content (PDF slide decks), auto-generate assessments using AI, assign courses to employees, track progress, and issue branded certificates upon completion.

Vision

Replace dependency on third-party LMS platforms (e.g. Disprz) with a Sprout-native solution that keeps data, revenue, and user experience in-house — while supporting Philippine-specific HR content and partner integrations.

---

2. Users & Roles

Role	Description
Admin	Creates/manages courses, uploads content, assigns courses, views team progress
Learner	Takes courses, completes assessments, earns certificates

Demo Team (hardcoded for prototype)

Name	Role	Is Admin
Noel Lorenzo Vicente	Director of Alliance Management	✅ Yes
Karofa Kristine Cartaño	Alliance Manager	No
Paolo Suarez	Alliance Manager	No
Jean Marjhorie Liquigan	Alliance Manager	No

3. Branding

Token	Value
Primary Dark	`#1B3A1B`
Accent Green	`#3ED320`
Light Background	`#f0faf0`
App Name	Sprout Learn
Logo	Sprout official logo (spiral leaf + "sprout" wordmark)
Font	system-ui / sans-serif

> **Note:** Logo must be served as a local file `/sprout-logo.png` on deploy. Replace SVG placeholder with `<img src="/sprout-logo.png" />`.

4. Core Features

4.1 Course Management (Admin)

Create Course (Manual)

- Fields: Title, Description, Category, Type (Free/Paid), YouTube Video ID (optional)
- Categories: Leadership & Management, HR & Compliance, Partner Solutions, Sprout Product Training, Uploaded Content, Other

Upload PDF Slide Decks (Bulk)

- Admin can upload **one or multiple PDFs** at once
- Each PDF becomes a standalone course
- System extracts text from PDF using **pdf.js** for AI question generation
- PDF pages are displayed as-is using browser's native PDF renderer (iframe with `#page=N`)
- `totalPages` is stored per course for slide navigation

Assessment Options on Upload

When uploading PDFs, admin selects one of three modes:

1. 🤖 **AI Generate** — Claude reads extracted text, generates 12 questions automatically (8 MC + 4 TF)
2. ✏️ **Add Manually** — Opens manual question builder after upload
3. ⏭ **Skip for now** — Upload slides only, add questions later

Add/Edit Assessment on Existing Courses

- Every course card in Admin → Courses shows an **"+ Questions"** button (or "Edit Q" if questions exist)
- Same two options: AI Generate or Manual Builder

Manual Question Builder

- Add unlimited questions
- Question types: Multiple Choice (4 options) or True/False
- Radio button to mark correct answer
- Add/remove questions dynamically

Assign Courses

- Assign to individual team members (checkbox selection)
- Or assign to entire department in one click
- Optional due date per assignment

Delete Course

- Trash icon on each course card
- Immediate deletion with toast confirmation

4.2 Course Viewer (Learner)

PDF Slide Viewer (SCORM-style)

- Dark immersive fullscreen layout
- PDF pages rendered via iframe (`pdfUrl#page=N`)

- **Fade transition** (0.26s ease) between slides
- Fixed bottom navigation bar:
  - ← Prev / Next → buttons
  - Dot scrubber (click any dot to jump to slide)
  - Progress bar in top bar fills as learner advances
- Slide counter: "Slide X of Y"
- Assessment button appears after last slide

YouTube Video Player

- Embedded iframe player
- Assessment button shown below video

No Content State

- Clean placeholder: "Content Coming Soon"
- If questions exist, assessment is still accessible

4.3 Assessments

- **Format:** Mix of Multiple Choice + True/False
- **Default count:** 12 questions (8 MC + 4 TF)
- **Pass threshold:** 80%
- **Behavior:**
  - Unlocks after learner reaches last slide
  - One question displayed per scroll block

- Submit disabled until all questions answered
- Score shown immediately on submission
- Pass → certificate modal auto-opens after 700ms delay
- Fail → option to retry

4.4 Certificates

- **Trigger:** Pass assessment with ≥80%
- **Design:** Sprout-branded, dark green gradient header
- **Fields:** Learner name, course title, score, date issued, "Sprout Solutions" as issuer
- **Two signature lines:** Date Issued + Issued By
- Dismissable modal (Close button)

4.5 Learner Dashboard

- Stats: Courses Assigned, Completed, Avg Progress %
- Animated count-up numbers on load
- "Continue Learning" list — top 4 assigned courses with progress bars
- Quick Start / Continue buttons per course

4.6 Course Library (Learner)

- Search by title or category
- Filter by category dropdown

- Filter by type (Free / Paid)
- Course cards show: type badge, content badge, question count badge, completion badge, progress bar
- Start / Continue / Review button per course

4.7 My Learning

- Full list of assigned courses
- Progress bar and percentage per course
- Start / Continue / Review action

4.8 Admin Dashboard (Overview)

- Stat cards: Team Members, Total Courses, Completions, Avg Progress %
- Leaderboard snapshot (top 4 by completions + avg progress)

4.9 Team Progress

- Per-member card: avatar, name, role, done/total badge, progress bar, avg %
- Color-coded completion badges (green = all done, amber = in progress, gray = not started)

4.10 Leaderboard

- Full leaderboard ranked by completions, then avg progress
- 🥇🥈🥉 medals for top 3
- Progress bar per member
- #1 card highlighted with accent green border

---

5. AI Integration

Provider

- **Anthropic Claude** (`claude-sonnet-4-20250514`)
- Called via browser using `anthropic-dangerous-direct-browser-access: true` header

Usage

- Generates assessment questions from extracted PDF text
- Prompt specifies: 8 MC + 4 TF, questions must reference actual document content, correct answer as index

API Key Handling

- **Prototype:** Hardcoded in frontend (acceptable for internal demo)
- **Production:** Must be moved to a backend proxy (Netlify Function or Express server) — never expose in client code
- Key to rotate after pitch: `console.anthropic.com`

Fallback

- If API call fails, 4 generic fallback questions are used silently

---

6. Animations & UX

Element	Animation
Page/card entrance	`fadeUp` with stagger delays
List items	`slideIn`
Modals	`popIn` (spring bounce)
PDF slide transition	Fade (opacity 0→1, 0.26s ease)
Toast notifications	`toastIn` (slide up)
Stat numbers	Count-up from 0 on mount
Progress bars	Width transition 0.6s cubic-bezier
Cards on hover	Lift + shadow
Buttons on hover	Brightness + slight lift

---

7. Pre-loaded Courses (Prototype Data)

#	Title	Category	Type	Content
1	Effective Leadership Fundamentals	Leadership & Management	Free	None yet
2	Philippine Labor Law Basics	HR & Compliance	Free	None yet
3	Data Privacy in the Workplace	HR & Compliance	Free	None yet
4	Manatal ATS Demo	Partner Solutions	Free	YouTube: `VjinpYMUMoc`
5	Conflict Resolution at Work	Leadership & Management	Free	None yet
6	Employee Onboarding Best Practices	HR & Compliance	Paid	None yet

8. Tech Stack

Layer	Technology
Frontend	React (hooks only, no external UI library)
Styling	Inline styles + CSS keyframe animations via `<style>` tag
PDF Rendering	pdf.js (CDN) for text extraction; native iframe for display
AI	Anthropic Claude API (`/v1/messages`)

Layer	Technology
State	React `useState` only (no Redux/Zustand)
Storage	In-memory only (prototype) — no persistence on refresh

---

9. Known Limitations (Prototype)

Issue	Root Cause	Fix
PDF iframe shows "blocked"	Claude sandbox restricts blob URLs	Works on deploy (Replit/Netlify)
Logo shows as SVG approximation	External images blocked in sandbox	Replace with `<img src="/sprout-logo.png">` on deploy
Data resets on refresh	No backend/database	Phase 2: Supabase integration
API key exposed in frontend	No backend proxy	Phase 2: Move to server-side function
No real login/auth	Prototype only	Phase 2: Auth system

---

10. Deployment

Target: Replit

- Existing project: `https://react-hub--nvicenteSprout.replit.app`

- Steps: Paste updated `App.jsx`, add `ANTHROPIC_API_KEY` in Secrets tab, click Run
- Backup: Netlify drag-and-drop (`netlify.com/drop`)

On Deploy — Quick Fixes

1. Upload `sprout-logo.png` to project root → change logo to `<img src="/sprout-logo.png" />`
2. PDF viewer will work automatically (blob URLs not blocked in real browser)
3. Move API key to environment variable: `process.env.ANTHROPIC_API_KEY`

---

11. Roadmap

Phase 1 — Prototype (Current)

- ✅ Course library with search/filter
- ✅ PDF bulk upload with AI question generation
- ✅ Manual question builder
- ✅ Add questions to existing courses
- ✅ SCORM-style PDF slide viewer
- ✅ YouTube video player
- ✅ Assessment with scoring
- ✅ Sprout-branded certificate
- ✅ Course assignment (individual + department)
- ✅ Team progress + leaderboard
- ✅ Animations throughout

Phase 2 — Post-Pitch

- [ ] Deploy to Replit with working PDF viewer + real logo
- [ ] Supabase backend — persistent progress, assignments, completions
- [ ] Real user authentication
- [ ] Email notifications for course assignments
- [ ] SCORM package upload support

Phase 3 — Production

- [ ] Content marketplace (OpenSesame, Udemy Business partnerships)
- [ ] LinkedIn Learning integration (requires API agreement)
- [ ] Philippine-specific HR content library
- [ ] Partner content (Manatal, Hubstaff, Peoplebox, Disprz)
- [ ] Analytics dashboard
- [ ] Mobile app

---

12. Content Strategy

Phase	Source	Timeline
Now	Sprout-produced videos, Partner demos, Client PDF uploads	Immediate
v2	SCORM upload support	1–3 months
v3	OpenSesame or Udemy Business partnership	6–12 months
v4	LinkedIn Learning integration	12+ months

Key differentiator: No global LMS has Philippine labor law content, BIR compliance training, or Sprout-specific product training. Sprout owns that space from day one.
